

May 6, 1963

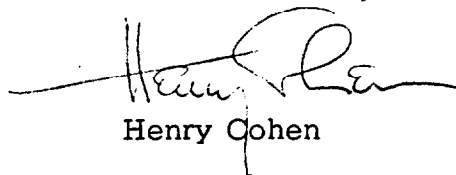

Professor J. Lederberg
Department of Genetics
School of Medicine
Stanford University
Palo Alto, California

Dear Professor Lederberg:

Syntex Laboratories, Inc. is happy to make available for research in your department, under your direction, a grant of \$7,500.00 for the year beginning May 1, 1963. These funds are intended to facilitate your investigations in the field of human genetics, population statistics, and the application of computer methods to these problems. We have been particularly interested in your current work on factors influencing the seasonal distribution of births, and wish to encourage investigations in this direction.

The funds will be made available by check payable to Stanford University on a quarterly basis; the first installment is enclosed herewith. These funds may be merged with other research funds available to your department and provided they are expended in accordance with general University policy, no financial accounting will be required. We would appreciate receiving a report on the technical outcome of the research supported by these grants, and copies of any publications that might ensue.

Yours cordially,

Henry Cohen
